

**Radiology Report (3598453-15/Radiographs Only - Priority)****Completed 12/23/17 08:12 AM****Patient Name:** Pearl Love (7605)

<b>Requesting Doctor:</b> Matthew Bettencourt, DVM	<b>Species:</b> Canine	<b>Age:</b> 2Yr 0Mo
<b>Gender:</b> Female	<b>Breed:</b> Labrador Retriever	<b>Weight:</b> 0.00 Lb

**HISTORY:** Priority

No physical complaints per owner. Elbow evaluation for breeding purposes only.

Radiographs of the right and left elbow joints are available for interpretation.

**FINDINGS:**

Right elbow joint: The right elbow joint is within normal limits.

Left elbow joint: The left elbow joint is within normal limits.

**CONCLUSIONS:** These radiographs of the right and left elbow joints are within normal limits. Developmental orthopedic disease or other osseous abnormality is not identified.**RECOMMENDATIONS:** A definitive indication for additional imaging of either the right or left elbow joint is not identified. If there is a concern regarding the possibility of elbow disease consider cranial caudal projections to further exclude the possibility of osseous abnormalities which might not be appreciated on this study. Again, additional imaging of the elbow joints is only recommended if indicated clinically.
